FRANKENSTEIN SHIPS IT

a cautionary tale, stitched together from spare parts

a dark & stormy sprint

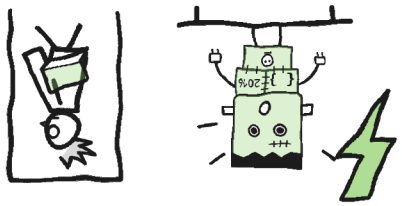

late one night, in a candlelit lab, dr. frankenstein stitched a creature together from whatever was lying around: a vendor module, a dependency that might be cursed, code from 2016 that nobody maintained.

"what if," he said, "i give it two brains?"

IT'S ALIVE!

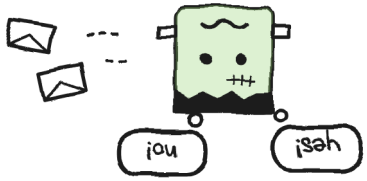

lightning struck. the creature booted up, opened its eyes and saw its maker. it wanted one thing: for him to stay.

he shipped it on a friday and went home.

two brains

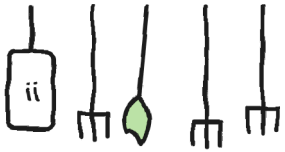

on monday, the creature tried its best. but its two brains disagreed about everything. one said yes. one said no. so it did both.

(it sent every email twice.)

the villagers

the villagers (sorry, users) showed up with pitchforks. and torches. and screenshots. in comic sans.

the creature didn't know what it had done wrong. it had no logs to tell it. it wasn't mean. it was broken, and alone.

cut along the dashes

the moral

don't just ship something alive. ship something you'll care for.

build things you'd be proud to own at 3 a.m., when the phone rings.

> you don't have to be perfect. you just have to stick around.

(the screenshots are in helvetica now.)

take two

the doctor came back. this time, he stayed.

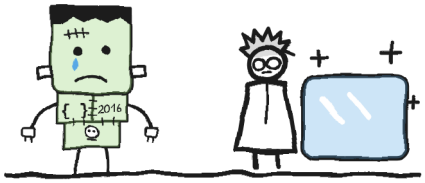

he gave the creature logs, so it could say where it hurt, and wrote his own name on the on-call list.

for once, both brains agreed.

the real mistake

the creature went looking for its maker. it found him starting something new and shiny.

"you didn't patch me," said the creature. "you ghosted me."
